AIR TEST KIT
WAL 90271W

The Air Test Kit is the perfect solution to check the quality of your compressor, monitor dewpoint, relative, humidity, temperature and more importantly check the quality of your compress air if it's free from impurities, oil, or other particles with the magnifier.

Practicing this short check of the painting air is essential to understand the quality of the air. This allows you to then give objective information on the conditions in which you operate and address eventual issues.
